for presenting information to identify the relative expression level of (1). (11) is used as a marker to detect, diagnose or identify an allergic response in a partient. The protein can also serve as a target that modulate gene expression or activity and as an antigen to raise polychonal or monoclonal antibodies. (11) is useful for identifying agents that modulate expression of the protein or agents, such as agonists or antagonists are useful for modulating biological activity and function of (11) and thus are useful for alleviating disease conditions such as allergic hypersensitivity, seasonal rhinitis, asthma, urticaria, atopic dermatitis or mastocytosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         540

cancer-associated transcript in a cell from a patient. The method comprises contacting a biological sample from the patient with prostate cancer-associated polymucleotides (designated PC genes) that selectively hybridise to a sequence that is at least 80% identical to them. The prostate cancer-associated polymucleotide sequences are differentially expressed in prostate tumour tissue or in prostate cancer and are derived from the tissues of various

present invention relates to methods of detecting a prostate

Detecting a prostate cancer-associated transcript in a cell in a patient, useful for diagnosing prostate cancer (PC) or screening modulators of PC, by determining if prostate cancer-associated genes

are expressed in a prostate tissue Claim 27; Page 386; 436pp; English

organisms such as humans or other mammals (e.g. mice, sheep and dogs). The methods of the invention are useful for diagnosing and treating prostate cancer in mammals. The prostate cancer associated genes are useful for diagnosing or treating prostate cancer, as well as for identifying modulators of prostate cancer as a security in the contract of prostate cancer.

                                                                                                                                                                                                                                                                                                                                                                                                The present invention provides prostate-specific coding sequences and their encoded proteins. These can be used in the diagnosis and treatment of cancers, particularly prostate cancer. The present sequence is a protein described in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 MVQRLWVSRLLRHRKAQLLLVNLLTFGLEVCLAAGITYVPPLLLEVGVEEKFWTMVLGIG

Patent No. US20020090372A1

GENERAL INFORMATION:
APPLICANT: Xu, Jiangchun
APPLICANT: Dillon, Davin C.
TITLE OF INVENTION: COMPOUNDS FOR IMMUNOTHERAPY OF PROSTATE CANCER AND
TITLE OF INVENTION: METHODS FOR THEIR USE
FILE REFERENCE: 210121.427C4
CURRENT APPLICATION NUMBER: US/09/115,453B
CURRENT FILING DATE: 1998-07-14
NUMBER OF SEQ ID NOS: 228
SSOTHARE: FaetSEQ for Windows Version 3.0
SSOTHARE: FaetSEQ for Windows Version 3.0
SSOTHARE: 533
                                                                                                                9

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Dacesion: C96769
R;Theologis, A.; Ecker, J.R.; Palm, C.J.; Federspiel, N.A.; Kaul, S.; White, O.; Alonso, Chin, C.W.; Chung, M.K.; Conn, L.; Conway, A.B.; Conway, A.R.; Creasy, T.H.; Dewar, K.; Anthors: Hunter, J.L.; Jenkins, J.; Johnson-Hopson, C.; Khan, S.; Khaykin, B.; Kim, C.; C.A.; Li, J.H.; Li, Y.; Lin, X.; Liu, S.X.; Liu, Z.A.; Lucos, J.S.; Maiti, R.; Marziali, Rizzo, M.; Rooney, T.; Schwartz, J.R.; Shinn, P.; Southwick, A.M.; Sun, H.; Tallon, I ker, M.; Wu, D.; Yu, G.; Fraser, C.M.; Venter, J.C.; Davis, R.W.
A;Title: Sequence and analysis of chromosome 1 of the plant Arabidopsis.
A;Accession: C96769
                                                                                                                                                              G; Function:
A; Description: catalyzes the hydrolysis of 1,4-beta-xylosidic bonds in xylans
A; Description: degradation
A; Pathway: xylan degradation
C; Superfamily: Clostridium endo-1,4-beta-xylanase B; endo-1,4-beta-xylanase bomology
C; Keywords: extracellular protein; glycosidase; hydrolase; polysaccharide degradation
C; Keywords: extracellular protein; glycosidase; hydrolase; polysaccharide degradation
C; Keywords: extracellular protein; glycosidase; hydrolase; polysaccharide degradation
F; R:1-27/Pomain: signal sequence #status predicted <WAT>
F; B-354/Product: endo-1,4-beta-xylanase homology <XIL>

C;Comment: This enzyme confers resistance to lincomycin.
C;Comment: This enzyme catalyzes the monomethylation of a specific adenosine within 23S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  7.15.18 polypeptide homolog - Bradyrhizobium japonicum
C; Species: Bradyrhizobium japonicum
C; Species: Bradyrhizobium japonicum
C; Species: 19-Dec-1933 #sequence_revision 18-Nov-1994 #text_change 23-Mar-1995
C; Accession: 448971

"Antibacterial and haemolytic peptides containing D-alloisoleucine
"Antibacterial and haemolytic peptides containing D-alloisoleucine
from the skin of Bombina variegata.";

EMBO J. 12:4829-4831(1993).

-!- FUNCTION: HAS ANTIMICROBIAL ACTIVITY, BUT NO HEMOLYTIC ACTIVITY.

--- FUNCTION: BOMBININ H HAS ANTIBACTERIAL AND HEMOLYTIC ACTIVITY.

--- SUNCTION: BOMBININ H HAS ANTIBACTERIAL AND HEMOLYTIC ACTIVITY.

--- SUNCTION: SPECIFICITY: Skin.

--- SIMILARITY: BELONGS TO THE BOMBININ PAMILY.
                       Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi;
Amphibia; Batrachia; Anura; Archeobatrachia; Bombinatoridae; Bombina.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Dasic residues; Signal; Hemolysis; D-amino acid.

-!- FUNCTION: UBIQUITIN-PROTEIN HYDROLASE IS INVOLVED BOTH IN THE PROCESSING OF UBIQUITIN PRECURSORS AND OF UBIQUINATED PROTEINS. THIS ENTER BY A THIOL PROTEINS. THAT RECOGNIZE AND HYDROLYZE A PEPTIDE BOND AT THE C.TERMINAL GLYCINE OF UBIQUITIN.
-!- CATALYTIC ACTIVITY: Ubiquitin C-terminal thiolester + H(2) 0 = ubiquitin + a thiol.
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Hayashizaki Y.; "Functional annotation of a full-length mouse cDNA collection.";

SUGAR PHOSPHOTRANSPERASE SYSTEM (PTS), A MAJOR CARBOHYDRATE ACTIVE—TRANSPORT SYSTEM. THE IICD DOMAINS (CONTAIN THE SUGAR BINDING SITE AND THE TRANSFEMBRANE CHANNEL, THE IIA DOMAIN CONTAINS THE PRIMARY PHOSPHORYLATION SITE (THE DONOR IS PHOSPHO-HPR); IIA TRANSFERS IT PO THE SUGAR. EIIBC-CRR BELONGS TO THE BILD DOMAIN TYPE AND LACKS A COVALENTLY BOUND EIIA DOMAIN. INSTEAD, EII-SCR-MEDIATES IT CORPOSHORYLATION OF SUCROSE REQUIRES, THE ACTIVITY OF ENZYME IIA-GLC, A COMPONENT OF THE MAJOR GLUCOSE TRANSPORT SYSTEM.

CATALITIC FOR STATISM OF THE MAJOR GLUCOSE TRANSPORT SYSTEM.

CATALITIC FORDING OF SUCROSE REQUIRES, THE ACTIVITY OF ENZYME IIA-GLATIC ACTIVITY. Protein N-phosphohistidine + sugar phosphate.

SUBSELLULAR LOCATION: Integral membrane protein. Inner membrane.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TIGREPARS; TIGRODOSS; DATE_GT. .

                                                                                                                                                                                                Biol. Chem. 272:31006-31015(1997).
FUNCTION: Has no NAAG hydrolyzing activity (By similarity).
EXHIDIS a dipeptidyl-peptidase IV type activity. In vitro, cleaves Gly-Pro-AmC.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (POTENTIAL)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CHARGE RELAY SYSTEM (POTENTIAL).

-!- FUNCTION: INVOLVED IN TRANSPORT OF PHOSPHOLIPIDS.
-!- CATALYTIC ACTIVITY: ATP + H(2)O = ADP + phosphate.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to the cation transport ATPases family (P-type ATPases). Subfamily IV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             "Structural analysis of Arabidopsis thaliana chromosome 5. Kerfeld C.A., Sawaya M.R., Krogmann D.W., Yeates T.O.;
"Structure of cytochrome of from Arthrospira maxima: an assembly of 24 subunits in a mearly symmetric shell.",
Acta Crystallogr. D.58:1104-1110(2002).
-!- FUNCTION: Functions as an electron carrier between membrane-bound cytochrome bof and photosystem I in oxygenic photosynthesis.
-!- SUBCELLULAR LOCATION: Cytoplasmic (Potential).
-!- SUBCELLULAR LOCATION: Cytoplasmic (Potential).
-!- FTM: Binds one heme group per molecule.
-!- PTM: Binds one heme group per molecule.
                                                                                                                                                                                                                                                                                                                            -!- SIMILARITY: Belongs to the cytochrome c family. PetJ subfamily. PIR; A00110; CCSG.
PDB; 1PIF; 08-AUG-01.
PDB; 1RIB; 03-JUL-02.
